

What is research in ISE?

BIOGRAPHY

John Y. Choe is an Associate Professor of Industrial & Systems Engineering at the University of Washington, Seattle. He is the Director of the Disaster Data Science Lab and the Deputy Director of the Center for Disaster Resilient Communities. He received his Ph.D. in Industrial & Operations Engineering and M.A. in Statistics from the University of Michigan, Ann Arbor. His work has been supported by the U.S. National Science Foundation, National Institute of Environmental Health Sciences, Centers for Disease Control and Prevention, and other public and private sector organizations.

ABSTRACT

Through facilitated discussions, we will explore what research is in industrial & systems engineering (ISE) and related fields. Some of the questions we will discuss include:

1. What is research?
2. Why do we research?
3. What differentiates ISE research from other disciplines' research?
4. What makes ISE research impactful?
5. What does all of this mean to an ISE graduate student?

All are welcome to join this conversation.
